

Discover Pso Pscience

Ever wondered what researchers are learning about psoriatic disease — and what it might mean for people living with psoriasis or psoriatic arthritis?

The new October edition of Pso Pscience is here to help make sense of it. Written by Dr David Ashton MD PhD, PAPAA's Senior Medical Adviser, this free twice-yearly digest picks out interesting stories from the medical press and explains why they matter.

This issue looks at a wide range of topics, from why psoriasis does not appear to affect non-human animals, to possible links between psoriasis and changes in taste and smell. It also explores faecal transplantation, climate change and childhood psoriasis, skin cancer, and whether artificial intelligence could change the future of psoriasis care.

Whether you are living with psoriatic disease, supporting someone who is, or simply interested in the latest research, Pso Pscience is an easy way to stay up to date.
